

The history of ICIS' European Spot Gas Markets Report

Since its launch in March 1995 European Spot Gas Markets has provided the natural gas industry with independent and trusted pricing information through the publication of the proprietary Heren Assessments and Indices. The daily benchmark report also includes in-depth analysis of price drivers, authoritative commentary and news.

European Spot Gas Markets brings price transparency to every new liberalised gas market in Europe. Initially the NBP hub in Britain in 1996 and then the Dutch TTF, through to emerging gas markets in Turkey, Slovakia and most recently the PVB.
